

## DIRECTIONS FOR USE OF THE NORB® NUTRI-ORB FOR GROWING PLANTS

Congratulations, you have purchased the unique Norb®, a specialized LED grow bulb that uses very little energy, provides the right spectrum for plant growing, and uniquely does so using light that is “white” to the eye. For this reason, your plants will not only grow well, but will look “right under white.”

Your Norb® bulb should only be used indoors (and kept dry), and how you use it is determined by what you are growing:

### Growing Herbs

**Mounting Distance:** Your Norb® bulb should be sited about 1 ½ to 2 feet away from your herbs (such as parsley, basil, chives, etc.), and used at full intensity.

**Run Time:** 14 hours, and we suggest using a simple timer to turn it on at 7 AM and off at 9 PM.

### Growing Tropical Foliage Plants

**Mounting Distance:** Your Norb® bulb should be located anywhere from 3 to 6 feet from your plants—depending upon their light needs. For “high light” plants, locate your Norb® bulb close and use it at high intensity.

For low light plants, locate it further away and use it at high intensity (or alternatively close up at low intensity).

**Run Time:** 14 hours, and we suggest using a simple timer to turn it on at 7 AM and off at 9 PM.
